# SAFE PATIENT CARE AND FLEXIBILITY WORKFLOW C

Safety and efficiency in patient care are paramount in an effective exam room design – and they are the focal points of this workflow layout. Seating the patient on the Barrier-Free® exam table throughout the visit reduces time needed for patient positioning and maximizes efficiency for both the physician and caregiver. Mobile workstations surrounding the exam table offer added control and flexibility to adjust to the point of care.

# SAFE PATIENT CARE AND FLEXIBILITY WORKFLOW C

Mobile workstations for EMR access and/or diagnostics create a flexible workspace around the care zone. The workstations are always within arm's reach, decreasing the caregiver's need to move within the space and maximizing engagement with the patient. All medical data is accessible at the point of care and can be shared or kept discrete.

A distinct family/visitor zone with an adjacent dressing nook is incorporated without interfering with the care zone.

Additional storage for instruments and supplies is provided away from the family/visitor zone. The exam room size is 10 ft. x 10 ft., providing ample access to the Barrier-Free® exam table.

## Safe Patient Care

The patient is seated on the Barrier-Free® exam table throughout the visit. There are no delays due to transferring the patient from other areas in the room.

The digital care and physical care interfaces are within the same zone. The movement of the physician is minimized, and constant contact with the patient can be maintained.

## Combined Work Zones with Mobile Diagnostics

A mobile diagnostics cart is used during the exam and can be shared between exam rooms, reducing equipment cost and providing flexibility.

Another mobile cart positions the computer/EMR next to the patient to maintain eye contact at all times and to create an adjustable care zone around the patient.
