# EFFICIENT PATIENT CARE WITH DEDICATED ZONES WORKFLOW D

This innovative workflow design provides clear separation between the care zone for caregiver interaction and the family/visitor zone with guest seating. It features a full-function Barrier-Free® exam table with integrated scale and EMR connectivity for added efficiency and ease of patient handling. The computer workstation is located adjacent to the Barrier-Free® exam table for optimal access of digital data at the point of care. In addition, supply storage is placed within arm's reach with a mobile cart unit for easily accessed supplies.

# EFFICIENT PATIENT CARE WITH DEDICATED ZONES WORKFLOW D

This design establishes two distinct zones: the care zone and the family/visitor zone. The family/visitor zone is easily accessible from the entry, provides guest seating and includes a dressing nook.

The integrated scale streamlines workflow and frees up space without the need for a floor scale in the room. It also decreases the need for manually lifting and repositioning patients.

A dedicated computer workstation provides the caregiver with all necessary information and supports flexibility between unobstructed access to the patient as well as digital data.

The mobile instrument and supply cart also improves the flow of the workspace around the care zone. This workflow decreases the need for the caregiver to move within the space, allowing for maximum engagement with the patient.

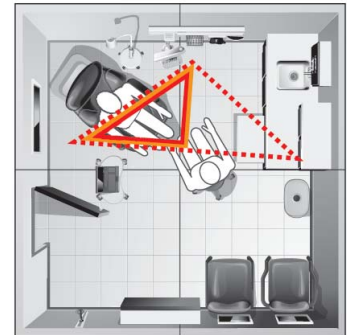

All medical data is accessible to the caregiver at the point of care and can be kept discrete or shared.

Storage and organization of instruments and supplies are designed for accessibility and separation from the public zone. The exam room size is 10 ft. x 10 ft.

### Public/Private Zones

The family/visitor zone, also known as the public zone, is easily accessible from the entrance and includes seating as well as a dressing nook for the patient **1**. It provides privacy, but does not infringe on the efficiency of the care zone, also known as the private zone **2**.

### Efficient Care Zone

Because the patient is seated on the Barrier-Free<sup>®</sup> exam table throughout the visit, there is no delay due to transfer or repositioning. Flexibility and proximity help increase the efficiency of the caregiver, reducing the need to move away from the patient to retrieve instruments and/or supplies.

### Supply Proximity

A mobile supply cart with well-organized drawers can be retrieved from a dock in the adjacent cabinet to be in close proximity to patient care. The supply cart also provides an additional work surface, positioned left or right of the caregiver.
